

Klejdi Tahiri

 **Home:** Spalto Gamondio 13, 15121, Alessandria, Italy

 **Email address:** kleiditahiri@gmail.com  **Phone:** (+39) 3292965994

ID: CA92041PM **Gender:** Male **Date of birth:** 18/11/2002 **Place of birth:** Durazzo, Albania

Nationality: Italian

ABOUT MYSELF

Computer Science student with solid experience in the development of mobile applications, websites, and distributed network systems. Strong skills in database design and management, with good proficiency in Microsoft tools, particularly Excel. Bilingual in Italian and English, with excellent interpersonal and teamwork skills. Thanks to my strong soft skills, I approach challenges proactively, with strong organizational abilities and a results-oriented mindset.

EDUCATION & TRAINING
[21/09/2022 - 27/04/2025]

Laurea in informatica
Università del piemonte orientale <https://www.disit.uniupo.it/it>
City: Alessandria | **Country:** Italy | **Field(s) of study:** Software and applications development and analysis , Computer use | **Thesis:** Virtual assistant with RAG & LLM

DRIVING LICENCE

Cars:	B	01/10/2021 - 18/11/2031
--------------	---	-------------------------

LANGUAGE SKILLS

Mother tongue(s): italian ed albanian
Other language(s):
Inglese
LISTENING: B2 **READING:** B2 **WRITING:** B2
SPOKEN PRODUCTION: B2 **SPOKEN INTERACTION:** B2
Spanish
LISTENING: A2 **READING:** A2 **WRITING:** A2
SPOKEN PRODUCTION: A2 **SPOKEN INTERACTION:** A2
French
LISTENING: A2 **READING:** A2 **WRITING:** A2
SPOKEN PRODUCTION: A2 **SPOKEN INTERACTION:** A2

SKILLS

Social Network | Padronanza del Pacchetto Office (Word Excel PowerPoint ecc) | Posta elettronica | Windows | Microsoft Office | Gestione autonoma della posta e-mail | Utilizzo del browser | Android |

PROJECTS

[01/11/2024 -
28/11/2024]

E-commerce with JavaScript

Developed an e-commerce website inspired by Zalando, featuring a responsive interface, user authentication system, dynamic product catalog, shopping cart, order management, and database integration. The project includes advanced functionalities such as search filters, wishlist, admin dashboard for product management, and a simulated payment system. I worked on both frontend and backend development, using modern technologies and following best practices for usability and security.

[01/05/2025 -
30/05/2025]

Android application in Kotlin for task organization.

Developed an Android application in Kotlin designed to facilitate task assignment and monitoring between caregivers and users. The app features two distinct roles (caregiver and user), with dedicated interfaces and customized functionalities. The system allows the creation, assignment, and management of tasks, real-time notifications, task status updates, and user profile management. The project focuses on usability, organization, and communication between users, with a simple and intuitive interface.

[06/10/2023 -
29/10/2023]

Database SQL

Designed and developed a relational SQL database for a streaming platform inspired by Twitch. The database manages users (streamers and viewers), profiles, channels, live streaming sessions, real-time chat, viewing history, followers, comments, and donations. It was structured to ensure data consistency, query efficiency, and scalability. Particular attention was given to data normalization, security (access and permission management), and referential integrity.

[01/09/2025 -
30/09/2025]

Distributed Toll Booth Management System

Developed a distributed toll management system based on a modern microservices architecture. The project includes:

- **Frontend:** Responsive web application for operators and administrators, designed to provide real-time traffic monitoring, access management, and payment tracking.
- **Backend:** Central server developed in Java using Apache Spark for processing large volumes of toll booth data, including vehicle transits, license plates, and timing information.
- **Python Microservices:** Dedicated services for specific functionalities such as Automatic Number Plate Recognition (ANPR), dynamic toll calculation, and data analysis.
- **Network Communication:** Modules communicate through REST APIs and asynchronous messaging systems such as RabbitMQ and

Apache Kafka, ensuring scalability and fault tolerance.

The project simulates a realistic and reliable infrastructure, with particular focus on concurrency, data security, and distributed request management.

- [01/08/2025 - 29/08/2025] **AI-based Fashion and Outfit Recommendation System (Python)**
Developed a small AI system in Python capable of providing personalized outfit and clothing combination recommendations. The system analyzes user input (preferences, season, usage context, preferred colors, etc.) and suggests outfit combinations aligned with fashion trends. It uses basic machine learning techniques along with predefined semantic rules, featuring a simple and interactive interface. The project demonstrates the application of AI in creative and personalized contexts.
- [03/03/2026 - 06/05/2026] **Responsive website development using React with integration of Supabase.**
Developed a responsive showcase website using React and Supabase, featuring contact forms for lead generation via email. Focused on optimizing user experience across desktop and mobile devices, with backend management and cloud database integration through Supabase.
